

Guardrail frame

✓ Professional use

- Available in three widths (0.75, 0.90 and 1.35 metres)
- Suitable for the RS TOWER 4 and RS TOWER 5
- Patented locking pin system

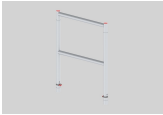

Altrex guardrail frames: Safe at any height

Using the guardrail frames of Altrex, you will always stand safely on your rolling tower at any required height. You increase safety by placing the guardrail frames above the highest platform. The guardrail frames form railings at the height of the knees and hips. They are available in three widths: 0.75, 0.90 and 1.35 metres.

Patented locking pin system

All the frames have a patented locking pin system permanently connected to the frames, making the loss of the system nearly impossible.

Connection

The guardrail frames are connected to each other by the 2x2 horizontal braces at both sides of the platform floor.

Available in a multitude of widths

The guardrail frames are available in various widths. For example, Altrex supplies guardrail frames of 0.75, 0.90 and 1.35 m wide. That way, you will always have the correct guardrail frame for your tower.
