

Mounter elevator machine room ladder

✓ Professional use

- Safe access to the elevator machine room
- Larger standing surface due to D-rung
- Secured and locked

Mounter elevator machine room ladder. Safe access to the elevator machine room ladder

Perhaps the most well-known ladder in the Netherlands. The Mounter is as strong as it is stable. The unique D-rung gives a secure footing due to its special shape. The wide surface provides increased comfort. This ladder has been specially designed for safely accessing an elevator machine room.

The elevator machine room ladder can be easily folded out as and when required. When collapsed, it is extremely compact and takes up very little space. The ladder is secured to a rod. It cannot therefore be removed by an unauthorised person. You can also lock it with a padlock. The top quality black coating is attractive as well as dirt-resistant.

Unique D-rung

The ladder incorporates the D-rung, unique to Altrex. The large, anti-slip standing surface offers more space and greater comfort.

Secured and locked

The ladder is mounted on a rod and can also be locked. The ladder then stays where it should.
