

## Stage

### ✓ Professional use

- Extra work floors between rolling towers
- Strong, sturdy but lightweight
- Suitable for RS TOWER 5 scaffolds

## Aluminium stage. Bridge obstacles and create extra work floors

The aluminium stage from Altrex offers you a range of opportunities. Position it between RS TOWER 5 scaffolds and this versatile stage will provide additional work space. Also handy for bridging obstacles. The construction is strong and robust with a maximum load of 200kg/m<sup>2</sup> for the sizes 4-6 meter. The stage is made of aluminium which makes it very light. Ideal if you often have to assemble and disassemble it. And safer if you're working at height.

### Possible to use on both sides

The walkway is available with a guardrail on one side if, for example, you are working against a façade. To make your work even safer, or if you are not working against a façade, you can create a guardrail on both sides.

### Anti-slip and perforated

The floor of the aluminium stage is perforated (to allow soil and water to escape) and anti-slip. This gives you a stable base and you can work safely.

EN 12811
