

RS 44-POWER single width folding tower

✓ Professional use

- Single width folding-/rolling tower, ideal for narrow spaces
- Further extension possible, also in Safe-Quick® version
- Foldable and compact to store and transport

RS 44-POWER single width Folding tower. Compact scaffold for narrow spaces

The RS 44-POWER is a handy folding tower. Ideal for outdoors and indoors due to compact format. Need to build higher? The system can be extended with components of the RS TOWER 4 Series. This allows you to easily extend the folding tower to a working height of 7.80 metres.

The folding tower is perfect for professional tasks in and around the house. The narrow frames of 0.75 meters means it fits through every standard door opening. The platform is available in the length: 1.85. The folding unit of the scaffolding means there are very few separate parts and the whole thing folds in half. It takes up very little space to store.

Foldable and compact

The RS 44-POWER has a folding unit in the scaffolding. The frame of the folding tower has no separate parts and folds completely in half. It takes up little space for storage.

Wooden platforms and toe boards

The system is supplied with wooden platforms. Reliable and solid.

Further assembly possible

The RS 44-POWER is a handy, basic folding tower, but it can also be extended to a working height of 7.80 metres. If necessary.

Wheels with rubber tread

The (Ø 150 mm) wheels on the folding tower have rubber treads. This makes the system suitable for indoor use.
