

## Chimney scaffold

### ✓ Professional use

- Easy and safe to work on chimneys
- Suitable for sloped roofs with an incline of 30-45 degrees
- Available in various lengths

### Chimney scaffold. Work platform for safely working on chimneys

With the Altrex Chimney scaffold, you create a work platform which makes chimney work safe and easy. This unique scaffolding has been specially developed for roofs of between 30 and 45 degrees. The Chimney scaffold is perfect for accessing chimneys.

#### Both sides of the roof

No matter which side of the chimney you are working on. The Chimney scaffold can be used on both sides.

#### Telescopic guardrails

You can set the guardrails depending on the distance between the platform and the chimney itself. This guarantees your protection and safety.

#### Interchangeable parts

The parts for the Chimney scaffold are interchangeable. The toe boards, double guardrail brace, horizontal braces and platforms, for example, can all be used with the RS TOWER 52 too.

#### Simple and quick assembly

The roof platform is easy to assemble as it has pre-drilled holes which allow the stand to be positioned at precisely the right angle. The ladder's ridge hook improves safety even further as it can be hooked over the roof ridge to make access even safer.

EN 12811
