

## Falco double sided stepladder (FDO)

### ✓ Professional use

- For professional use
- Double-sided accessible, can be used on both sides
- Safe in use and prevents finger entrapment due to smart hinge system of the platform
- Increased sturdiness thanks to single box-profiled treads

### Falco (FDO) - double sided The steps for professional use

The Falco is designed for intensive use. It is double-sided accessible and can be used on both sides. The robust, shaped treads are ideal for any professional task. The unique hinging system on the top platform makes this stepladder exceptionally safe to use.

The grey coating is not just stylish, it is also dirt-resistant and does not come off on your hands. Strengthening braces and large anti-slip feet ensure stability. The safety guardrail gives you additional safety. When folded up, the stepladder is easy to transport. The self-locking spreader protection (from FDO 2x3) means you can be sure that the stepladder will not fold up inadvertently. Anti-slip feet also provide sturdiness and stability. A stepladder for any professional task.

#### Smart hinging system

Optimum ease-of-use! You can count on it thanks to the unique hinging system above the top platform. This prevents fingers getting trapped.

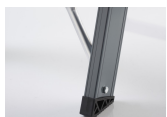

#### Accessible on both sides

The Falco double-sided offers the highest levels of comfort. You can use it on both sides. So you don't need to move the stepladder as often.

#### Extra sturdy treads

The single box profile of the treads gives the Falco greater sturdiness. The high, rounded treads provide optimum support for your shins.

#### Stable and secure

Large anti-slip feet provide reliable stability. Greater certainty, greater safety.

#### Pop-riveted treads

The treads are fastened using pop-rivets. They can therefore be replaced easily if this becomes necessary.

### Product specifications

Item number	type	number of treads	foldable guardrail	storage length (m)	standing height (m)	max working height general (m)	weight (kg)	spread safety	floor surface (m2)	EAN	max loading (kg)
