

Taurus double sided stepladder (TDO)

✓ Professional use

- Double-sided, can be used on both sides
- Robust treads thanks to double-box profiled treads
- Easy to use thanks to smart hinge system
- For intensive, professional use

Taurus (TDO) - double sided Robust stepladder for building and industry

The stepladder with the best features. It is double-sided and can be used on both sides. User-friendly and robust. For the professional who needs more. The Taurus is designed for intensive use. The unique hinge system on the guardrails make the treads exceptionally safe to use. The dirt resistant black coating makes these treads suitable for every professional job.

The optional safety guardrail gives you additional safety. In 2 seconds simply fold the bracket in so that the treads are compact for transport. The self-locking metal spread protection (from TDO 2 x 3) prevents the stepladder from unexpected closure while in use. Anti-slip feet also provide sturdiness and stability. A stepladder of the very highest quality.

Smart hinging system

Optimum ease-of-use! You can count on it thanks to the unique hinge system above the guardrails. This prevents fingers getting trapped.

Accessible on both sides

The Taurus double-sided offers the highest levels of comfort. You can use it on both sides. So you don't need to move the treads as often.

Extra sturdy treads

The double box profile used for the treads makes the Taurus the sturdiest in its category. The high, rounded treads provide optimum support for your shins.

Stable and secure

Large anti-slip feet provide reliable stability. Greater certainty, greater safety.

Pop-riveted treads

The treads are fixed using pop-rivets. They can therefore be replaced easily if this becomes necessary.

Product specifications

| Item number | type | number of treads | foldable guardrail | storage length (m) | standing height (m) | max working height general (m) | weight (kg) | spread safety | floor surface (m ²) | EAN | max loading (kg) |
|-------------|-------|------------------|--------------------|--------------------|---------------------|--------------------------------|-------------|----------------|---------------------------------|---------------|------------------|
