

## Taurus single sided stepladder (TGB)

### ✓ Professional use

- Single sided stepladder
- Robust treads thanks to double-box profiled treads
- Two decks means two work levels
- For intensive, professional use

## Taurus (TGB) single sided access. The stepladder for construction and industry

The stepladder with the best characteristics. Ease of use and robust. Specifically for the professional who demands more. The Taurus is designed for intensive use. Thanks to the self-release hinge system, the stepladders are remarkably handy and easy to use. Quickly set-up, quickly packed up. The dirt resistant black coating makes these treads suitable for every professional job.

The two platforms on top of each other are especially unique. Thus, you have two safe and comfortable work spaces. The self-locking metal spread protection (from TGB 6) prevents the stepladder from unexpected closure while in use. Moreover, you stand firm and stable due to the large anti-slip feet and enclosed hinges. A stepladder at the highest level.

### Clever hinge system

Optimal ease of use. You can count on it, thanks to the self-release hinge system on the platform.

### Two platforms, double comfort

The Taurus excels in comfort. By using two platforms, you have two additional safe and spacious work levels.

### Extra sturdy treads

The double box profile of the treads makes the Taurus the most robust of its kind. The high rounding gives your shins optimum support.

### Stable and secure

Large anti-slip feet for reliable stability. More security, more safety.

### Riveted treads

The treads are fixed using pop rivets. Thus, they can be replaced quickly should this be necessary.

## Product specifications

Item number	type	number of treads	foldable guardrail	storage length (m)	standing height (m)	max working height general (m)	weight (kg)	spread safety	floor surface (m2)	EAN
